

‘resources **SAVED**’ certificates - Share our joint success for the environment

Dear customers,

Through the circulation of 2.1 million tonnes of recyclable materials, Interzero was able to conserve **8.7 million tonnes of primary resources** and save approximately **1 million tonnes of climate-harming greenhouse gases** – a success to which our collaboration has also contributed. The **annual "resources SAVED by recycling" study** by the Fraunhofer Institute UMSICHT shows what we are achieving together in terms of climate and resource protection. **On this base we can provide all our customers with their individual ‘resources SAVED’ certificate.**

Would you like to use this **joint success for your sustainability communication**? Then feel free to share the attached social media graphics via your corporate channels on **LinkedIn or Instagram**.

Please read the notes on the following page →

Use of the graphic(s)

- We provide you with a **two-part graphic for your channels** ('carousel post'). You are welcome to use both graphics in one post or just one graphic. If you decide in favour of a carousel post, please upload both graphics as a PDF.
- You can optionally insert your company logo next to the Interzero logo in the graphic. **If you need graphic support, send us an e-mail to marketing@interzero.de**
- **Use the hashtag #resourcesSAVED** to create a connection to Interzero and the 'resources SAVED' study - we are of course also happy **to receive a link @Interzero.**

If you have any questions, please contact us directly:
